Summary

Data Engineer with 1+ years of professional experience designing and developing cloud-native data pipelines, AI-powered microservices, and real-time transaction processing solutions within enterprise banking systems. Proficient in Python, SQL, BigQuery, Google Kubernetes Engine (GKE), Apache Kafka, and Large Language Models (LLMs). Experienced in building scalable AI-driven applications for financial transaction validation, sanctions screening, ETL pipelines, and cloud-based data engineering workflows.

Experience

- **Data Engineer** **Pune**
Deutsche Bank Sept 2025 – Present
 - Developed AI-powered transaction validation microservices using Python, SQL, Google Cloud Platform (GCP), BigQuery, and LLM APIs to automate sanctions screening and Pass/Hold decision workflows for high-volume financial transactions.
 - Designed and deployed containerized microservices on Google Kubernetes Engine (GKE), integrating multiple database instances and scalable API-based services to support enterprise transaction processing across diverse environments.
 - Built streaming-based transaction processing workflows using Apache Kafka, integrating real-time payment messages with LLM-powered validation services to improve decision accuracy and operational efficiency.
 - Engineered prompt-based AI workflows for multiple banking payment formats, including ISO 20022, SWIFT, and SCT, enabling intelligent analysis, transaction validation, and explainable AI-driven decision support.
 - Queried and processed large-scale financial datasets using SQL and Google BigQuery, integrating structured transaction data with AI services to support millions of monthly transaction validations.
 - Collaborated on enterprise deployment, configuration, and integration of AI microservices across multiple environments and database instances, ensuring scalable, reliable, and compliant transaction processing.
 - Developed explainable AI validation logic and audit-ready workflows, improving compliance reporting, reducing manual investigation effort, and enhancing operational efficiency.
- **Big Data Training** **Pune**
Zeyobron Analytics Aug 2024 – Feb 2025
 - Completed hands-on training in Hadoop, Apache Spark, Apache Kafka, Python, SQL, ETL concepts, and distributed data processing.
 - Developed batch and streaming data pipelines using Apache Spark and Apache Kafka to process structured and semi-structured datasets.
 - Implemented SQL-based data extraction, transformation, and loading (ETL) workflows, focusing on data cleansing, aggregation, and performance optimization.
 - Worked with Spark DataFrames and RDDs to perform large-scale data transformations, filtering, joins, and analytical processing.
 - Built end-to-end data ingestion workflows integrating Python, SQL, Spark, and Kafka while gaining practical exposure to scalable Big Data architectures.
 - Strengthened understanding of distributed computing, data partitioning, fault tolerance, and performance optimization techniques for enterprise-scale data processing.

Education

- **B. Tech. in Artificial Intelligence**
Savitribai Phule Pune University (SPPU)
G.H. Raisonni, Pune
Dec 2021 – May 2024
- **Diploma in Computer Science**
Maharashtra State Board of Technical Education (MSBTE)
MIT Polytechnic, Pune
May 2018 – Dec 2021
- **10th Standard**
Central Board of Secondary Education (CBSE)
Sinhgad Spring Dale School, Pune
Jul 2017 – March 2018

Projects

- **MLOps Model Deployment Platform**
Developed an end-to-end machine learning deployment platform using FastAPI, Docker, GitHub Actions, MLflow, and AWS. Automated model versioning, containerized deployment, CI/CD pipelines, experiment tracking, inference APIs, and production monitoring while following scalable MLOps and software engineering best practices.
- **End-to-End Data Engineering Pipeline**
Designed and developed a scalable data engineering platform using Python, Apache Spark, Apache Kafka, Apache Airflow, PostgreSQL, and Docker. Built automated ETL pipelines for batch and streaming data ingestion, transformation, validation, and analytics with modular architecture, workflow scheduling, monitoring, and containerized deployment following enterprise data engineering practices.
- **AI Financial Intelligence Platform**
Developed an enterprise AI-powered financial document intelligence platform using Python, FastAPI, and REST APIs with modular layered architecture. Built secure document ingestion, validation, parsing, and AI-powered semantic search for PDF, XML, ISO 20022, and SWIFT financial messages using Retrieval-Augmented Generation (RAG), Sentence Transformers, FAISS vector database, and OpenRouter LLMs. Containerized the application using Docker and implemented Git-based CI/CD workflow following enterprise software engineering best practices.

Skills

- **Programming:** Python, SQL, PySpark
- **Cloud & Infrastructure:** Google Cloud Platform (GCP), BigQuery, Google Kubernetes Engine (GKE), Kubernetes
- **Data Engineering:** Apache Spark, Apache Kafka, ETL, Data Pipelines, Data Warehousing, Batch Processing, Stream Processing, Data Modeling, Data Integration
- **Analytics & Visualization:** Exploratory Data Analysis (EDA), Power BI
- **AI & Machine Learning:** Large Language Models (LLMs), LLM APIs, Prompt Engineering, RAG, Explainable AI
- **Backend & Architecture:** Microservices, REST APIs, Containerization
- **Financial Messaging:** ISO 20022, SWIFT, SCT
